PROFESSIONAL SUMMARY

Senior Backend & Data Engineer with 6 years of experience building high-concurrency microservices, REST APIs, and distributed data pipelines on AWS and Databricks. Specializing in database optimization, cloud architecture, and integrating modern AI capabilities into enterprise microservices.

TECHNICAL SKILLS

Languages: Python, Bash, JavaScript, SQL
Backend & Frameworks: FastAPI, Flask, RESTful APIs, Microservices Architecture, Redis
Data Engineering: Databricks, Apache Spark (PySpark), AWS Glue, Apache Beam, Redshift
Cloud & DevOps: AWS (EKS, ECS, S3, RDS, Kinesis, API Gateway), GCP, Docker, Kubernetes
Databases: PostgreSQL, MySQL, Vector Databases, AWS Aurora
System Design: Distributed Systems, Rate Limiting, High Availability, Fault Tolerance

EXPERIENCE

Abbott

Oct 2023 – Present

Senior Software Engineer / Backend Architect

- Spearheaded data platform migration from Amazon Redshift to Databricks, refactoring 15+ AWS Glue ETL pipelines and optimizing PySpark jobs to reduce execution runtime by 83% (from 3.5 hours to 35 minutes).
- Architected high-throughput FastAPI microservices on AWS EKS using Redis caching and API Gateway rate-limiting, serving 500k+ daily API requests at 99.99% uptime with sub-40ms p99 response times.
- Engineered a production-grade Generative AI microservice using RAG architecture and Vector Databases in an iOS application, replacing legacy AWS Lex to enable sub-second contextual responses for 2,000+ active field users.
- Implemented circuit breaker patterns and automated failover mechanisms across critical enterprise microservices, ensuring zero data loss during high-concurrency compliance policy verification events.

Forcepoint Corp

Jan 2023 – Oct 2023

Software Development Engineer II

- Designed real-time data processing pipelines using Apache Spark and Apache Beam, processing over 5TB of daily security log data across AWS and GCP environments with 99.9% uptime.
- Optimized PostgreSQL and AWS RDS query execution by implementing multi-column indexing and query plan tuning, reducing API p95 database query latency by 60%.
- Streamlined continuous integration and deployment workflows using Python, Bash scripts, and Docker/EKS pipelines, automating manual operations and saving 15+ engineering hours per week.
- Integrated AWS Kinesis streams with EKS-hosted microservices to achieve real-time log ingestion and anomaly detection across enterprise security platforms.

Persistent Systems

Jan 2022 – Jan 2023

Senior Software Engineer

- Engineered secure, scalable REST APIs using Python Flask and GCP, supporting backend services for over 1M monthly active users while maintaining OAuth2 authentication standards.
- Automated multi-cloud server provisioning and container orchestration across AWS and GCP using Docker and Kubernetes, reducing environment deployment times from 2 days to under 30 minutes.
- Led technical execution across a team of 4 engineers throughout the full SDLC, conducting peer code reviews and enforcing strict unit testing coverage standards (>85%).

Persistent Systems

Aug 2020 – Jan 2022

Software Engineer

- Developed high-concurrency Python RESTful microservices for Swayam (national education platform), maintaining <100ms average response times during peak registration periods for 10M+ users.
- Configured GCP Load Balancers, Cloud CDN, and Stackdriver monitoring to maintain 99.95% uptime and resolve network bottlenecks during major traffic surges.
- Created custom Python and Bash automation scripts for routine database backups, reducing operational downtime and manual maintenance effort.

EDUCATION

Pune University - K.K. Wagh College of Engineering

Aug 2016 – Jul 2020

Bachelor of Engineering in Computer Science (GPA: 9.1/10)

ACHIEVEMENTS & AWARDS

- **Data Platform Excellence Award (Abbott):** Recognized for leading the Redshift-to-Databricks migration, modernizing Glue/Spark jobs, and delivering an 83% runtime reduction.
- **Top Talent Of The Year Award (Persistent Systems):** Awarded top engineering honors for exceptional product delivery across multi-cloud environments in 2022.
- **6x Bravo Excellence Award:** Recognized for outstanding cross-functional technical leadership, system architecture contributions, and cross-team collaboration.
